

I am a raindrop. I fall on the **earth** and fill **ponds, lakes and rivers**. Rivers flow while lakes and ponds do not. Lakes are bigger than ponds.

I fall on the ground and seep **underground** too. People dig **wells** and **borewells** to reach me. They also use **pumps** to lift me up from the ground. People use me for their needs.

Think! Why do lakes and ponds have less water in summer? Discuss.

Water: From the River to the House

River / Lake / Dam → Large pipes → Over head tank → Sump → House water tank → Tap

DO YOU KNOW?

If you have fever, be sure to drink a lot of water; it will help to bring down the fever.
